

Features

1 2-CYLINDER ENGINE

Powered by natural or LP gas, this 30 horsepower engine provides plenty of power and continues to operate without constantly refilling a gas tank, even during the longest outage.

2 AUTOMATIC STARTUP

You don't even have to flip a switch. This generator starts itself and begins supplying power to your home.

3 EMERGENCY LOAD CENTER

The emergency load center mounts beside the main power panel to distribute generator power to selected circuits. The generator power is automatically shut off when main power is restored.

4 SOUND DEADENING CABINET*

This rugged cabinet is insulated to minimize sound, louvered to vent exhaust and coated with a tough, powder painted finish for lasting good looks and durability. It's also factory mounted to a sturdy, composite base.

5 QUIET RUN-TEST

An ultra quiet mode 12-minute weekly exercise run operates at 59dB to keep the engine lubricated and lets you know the system is ready.

*16KW model available with aluminum or steel cabinet options.

Automatic Home Generator

Bryant Gives You The Power

Trusted Since 1904

For more than a century, Bryant has gained a nationwide following of homeowners who appreciate products of high quality, value and reliability. It's a reputation we're proud of, the driving force behind our continuous effort to develop products that not only deliver comfort, but peace of mind. And, that's why we're excited to offer the Automatic Home Generator.

The Automatic Home Generator is the convenient and totally automatic way to provide electricity to your home when the utility power is interrupted. Installed by your trusted local Bryant dealer and backed by the best name in the business, this product delivers on Bryant's promise to do whatever it takes to keep you comfortable.

We've Got Your Back When The Lights Go Out

Every week, 3.5 million people experience a power loss. A power loss interrupts your home, interrupts your work, it interrupts your life. More and more often, it is becoming a reality for home and business owners.

Weather isn't the only reason power loss is becoming more common. We have an aging power grid. The power grid is one of the most complex systems ever constructed,

and very few new initiatives are being launched to address the shortcoming. Think about the last time a power plant or transmission lines were built in your area; then think of how many new homes have been built over that same time period. The need for an automatic home generator has never been greater.

A Quiet, Convenient Alternative Power Source

Installing an automatic home generator can put you and your family at ease. The unit is permanently installed outside of the home just like your air conditioner. When you lose power, the generator will automatically start itself and provides power back to your house within 30 seconds. When the utility is restored, the generator

automatically shuts down and waits for the next outage. Because these units are automatic, we have you covered whether you are home or away. The unit gets its fuel directly from your natural gas line or liquid propane tank. There is no need to handle gasoline or run a maze of extension cords.

To Live Life Uninterrupted.

Warranty

Bryant guarantees your comfort with written product warranties. The Automatic Home Generator is backed with a 2-year limited parts and labor warranty. Extended warranties are also available. Ask your Bryant dealer for details.

Performance

You Can Trust Bryant To Deliver Safety And Reliability

There are several benefits to an automatic home generator: preparedness, peace of mind and protection to name a few. And, when you choose a Bryant generator there are also benefits in service and quality that can't be found with other manufacturers, such as:

- Bryant generators are sold with all the parts needed for installation. You may be paying more for these "extras" with other suppliers.
- Your Bryant dealer, whom you trust to keep your heating and cooling system maintained, can maintain the generator as well. You can keep all your needs with one familiar face and one phone call.
- The unit cares for itself. The generator will start the engine and run-test for approximately 12 minutes once a week. This keeps the engine lubricated for long term reliability and gives you the peace of mind that it will run when you need it the most.

The Safer, More Reliable Option

Indeed, portable generators are a less expensive option. However, we know that a Bryant Automatic Home Generator will provide you better service and make you safer. Consider the advantages of an automatic over a portable.

- Convenience: No need to go out in potential danger to set up the unit, make sure it has fuel, and run extension cords.
- Energy efficient: Operating on natural gas or LP provides a cleaner burning and less expensive fuel than unleaded gasoline.
- More power: Portables can provide power to a few select conveniences, a Bryant unit can provide electricity to the whole home.
- Safety: When properly installed, the automatic home generator is safer to the home owner from carbon monoxide emissions and safer to the utility company employees from electrical back feed to the power lines.
- Built to last: Units are built in steel or aluminum cabinets for longer life.
